

Process Solutions - Through Formulation & Fabrication

Customer: SIC 3579 Manufacture office machines, NEC
NAICS 333313

What they do: This company offers a complete range of mail sorting and processing machines. They manufacture and design innovative mail automation equipment.

The need: to have a portable bin system integrated into their state of the art mail extraction equipment. The part needed to be strong yet fit aesthetically with the machinery

Solution: MFG Tray Co's Model 841008 bin. We fabricated this large bin with 5" casters. The 841008 simply fits under several of this company's automatic extraction machine. Empty envelopes are ejected through a slot into our bins. When the bins are full with several hundred pounds of envelopes, the bins are rolled to a paper recycling area and dumped.

This company has purchased over 2,500 of these bins with casters. That's almost \$300,000 in fabricated MFG containers.
